

Plum AI Automation Engineer - Intern Assignment Package

Overview

Welcome! This package contains everything you need to complete the OPD Claim Adjudication Tool assignment for the AI Automation Engineer intern position at Plum.

Package Contents

assignment_package/

|

├── README.md # This file

├── plum_intern_assignment.md # Main assignment document with requirements

├── policy_terms.json # Insurance policy configuration

├── adjudication_rules.md # Business logic for claim decisions

├── test_cases.json # Test scenarios with expected outputs

└── sample_documents_guide.md # Guide for creating test documents

Your Mission

Build an AI-powered web application that automates the adjudication (approval/rejection) of OPD insurance claims by:

1. Processing medical documents (bills, prescriptions)
2. Extracting relevant information using AI/LLMs
3. Validating against policy terms
4. Making intelligent approval/rejection decisions

Getting Started

Step 1: Read the Assignment

Start with `plum_intern_assignment.md` to understand the full requirements and evaluation criteria.

Step 2: Understand the Business Logic

- Review `policy_terms.json` to understand coverage limits and exclusions
- Study `adjudication_rules.md` to learn the decision-making process
- Examine `test_cases.json` to see expected behavior

Step 3: Set Up Your Development Environment

- # Clone this assignment package
- # Set up your preferred tech stack (React/Next.js + Node/Python)
- # Get API keys for LLM services (OpenAI, Claude, or open-source)

Step 4: Create Test Documents

Use `sample_documents_guide.md` to understand medical document formats and create mock documents for testing.

Step 5: Build Your Solution

Focus on:

- Document upload and processing
- AI-powered data extraction
- Rule engine implementation
- Clean, intuitive UI
- Comprehensive testing

Pro Tips

1. **Start Simple:** Build a basic working version first, then add advanced features
2. **Use AI Tools:** We encourage using Cursor, Copilot, or other AI coding assistants
3. **Document Everything:** Clear documentation shows your thinking process
4. **Test Thoroughly:** Use all provided test cases and create additional ones
5. **Ask Early:** If something is unclear, ask within the first 24 hours

Evaluation Focus Areas

- **Core Functionality** (40%): Does it work correctly?
- **AI Integration** (25%): How effectively do you use LLMs?
- **Code Quality** (20%): Is the code clean and maintainable?
- **User Experience** (15%): Is it easy to use?

Timeline

- **Total Duration:** 2-3 days from receipt
